

LPWA/ Sub-GHz Cellular Ceramic Chip Antenna Evaluation Board

ACAR3705-SB-EVB

107.0 x 45.0 mm

Description

ACAR3705-SB-EVB Evaluation boards are designed to provide a means to facilitate engineering evaluation of the chip antenna : ACAR3705-SB-T working between . With a typical operating frequency range of 698 ~ 960 MHz, the chip can be used for LPWA/NB-IoT/ Sub-Cellular Bands of 2G/3G/4G/LTE applications.

To evaluate the performance of antenna, calibrate the Vector Network analyzer (VNA) for the testing frequency band and connect the evaluation board to the calibrated port using the given SMA connector on the board.

Evaluation Board with Matching Circuits

Evaluation Board dimension : 107 x 45 mm

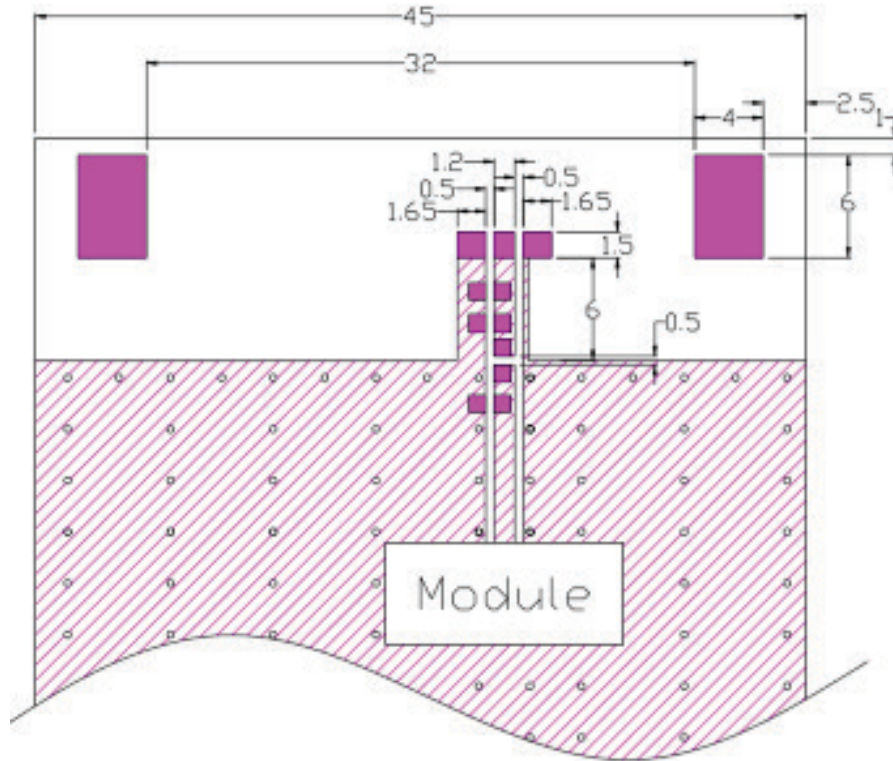

Unit: mm

LPWA/ Sub-GHz Cellular Ceramic Chip Antenna Evaluation Board

Matching Network on EVB

Antenna matching network is designed using a combination of inductor and resistor near the input terminal.

Circuit Symbol	Size	Description
L1	0402	22 nH
L2	0402	12 nH
L3	0402	27 nH

Note :

1. White space around the chip antenna in “Chip Antenna Layout” represents the ground clearance area.
2. Desired clearance area : 45 x 14.5 mm
3. Width of the 50 Ω line is designed in accordance with the PCB thickness and material considered.
4. Matching network (Pi - network) provided is in accordance with the EVB layout and matching will differ in the actual customer PCB depending on the layout.
